Product datasheet for TA327738

alpha 1 Spectrin (SPTA1) Mouse Monoclonal Antibody [Clone ID: RBC2/3D5]

Product data:

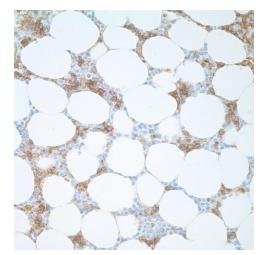

Product Type:	Primary Antibodies
Clone Name:	RBC2/3D5
Applications:	IHC
Recommend Dilution:	IHC: 1:10 - 1:100
Reactivity:	Human
Host:	Mouse
lsotype:	lgG1, kappa
Clonality:	Monoclonal
Formulation:	The antibody is diluted in tris buffered saline, pH 7.3-7.7, with 1% BSA and <1% sodium azide.
Purification:	Affinity purification
Gene Name:	spectrin alpha, erythrocytic 1
Database Link:	<u>NP_003117 Entrez Gene 6708 Human</u>
Synonyms:	EL2; HPP; HS3; SPH3; SPTA
Note:	Spectrin is an actin-crosslinking and molecular scaffold protein that links the plasma membrane to the actin cytoskeleton and functions in the determination of cell shape, arrangement of transmembrane proteins, and organization of organelles. It is a tetramer made up of alpha-beta dimers linked in a head-to-head arrangement. The gene is one member of a family of alpha- spectrin genes. The encoded protein is primarily composed of 22 spectrin repeats which are involved in dimer formation. It forms weaker tetramer interactions than non-erythrocytic alpha spectrin, which may increase the plasma membrane elasticity and deformability of red blood cells. Mutations in the gene result in a variety of

hereditary red blood cell disorders, including elliptocytosis type 2, pyropoikilocytosis, and spherocytic hemolytic anemia. Anti-spectrin is useful in the diagnosis of erythroid leukemias.
